Cost Savings Strategy- COR Maintenance Audits

Employers have a substantial cost savings strategy available to them for COR Maintenance Audits if they train an employee to serve as their Internal Auditor. Companies can save the cost of hiring a contract External Auditor for their maintenance audits by sending an internal staff member to take Enform's Certified Health and Safety Auditor Program.

Maintenance audits are required for 2 of the 3 year COR cycle. This would provide valuable cost savings for both maintenance years.

More Information:

- Review Track 1: Internal (Maintenance) Auditor on our website, <http://www.enform.ca/cor/for-auditors.cfm> for further details on the prerequisite course and the process to follow.

The following courses are required to become an auditor.

- [Safety Program Development](#)
- [Certified Health and Safety Auditor Program](#)

Register today by completing the Internal Auditor Application Form. The form can be found by logging into My Enform and selecting the Auditor Portal then selecting Apply to become an Enform Auditor.

Thank you,

Safety Audits and Certifications
